

5. DISCUSSION

- Very easy to construction
- We can get properly any Voltage value, from 0V to 12V
- We can get properly any Current value, from 10mA to 3A
- The output voltage can be obtained without any dropout.
- Short circuit & Over load protection properly working
- By applying 5A Transformer, the alignment can be achieved up to 5A Output.
- Made for relatively low cost.
- Can be packed in a metal or plastic small box.
- Very easy to operating.

6. Conclusion

- This is high quality DC power supply.
 - Properly Variable Voltage & Current.
-
