

MAJORA'S MENPO

Inspired by The Legend of Zelda
By Thomas Hanna

I made this template for making the modified version of the Majora's Mask from the Legend of Zelda. I drew inspiration from some 3D models I saw online. Please feel free to make any modifications you would like.

- Cut out all the pieces of the template and trace them onto the material of your choice (I used 6 mm and 4 mm EVA foam)
- Most of the parts contain registrations marks, which look like little U's on the edges. These marks are to help you keep the shape aligned and force the foam into a curve. You trace these onto the foam, you do not cut them.
- There are larger darts on some pieces, these are to be cut into those parts to allow that area to curve.
- There are blue highlighted edges on a lot of the pieces, this blue means that the edge it is on needs a 45 degree angled cut inward. It is most on the outside edges of the parts.
- You could certainly try and make it out of other thicknesses of EVA, I chose 6 mm because I needed the parts to be sturdy but still have enough flexibility for me to curve into shape.
- There are notes on the next page about parts that were not templated for this build.
- Some adjustments and reductions in size may be needed in order to fit smaller heads.
- Along with the EVA/craft foam you will need: 6mm and 24 mm EVA dowels, 1 inch elastic banding, contact cement, super glue, a rotary tool , rotary sanding bits, woodburning tool, scissors, xacto or box cutter, Plasti dip or something to seal it with, spray paint, and acrylic paints.

Hopefully this is helpful and keep in mind it is a free template (so please don't be judgmental). Share this with everyone you know. I spend a lot of extra time making these templates and would love to be tagged in photos of your end results on social media. And inevitably someone is going to ask you, HOW did you make that? Give them one of these  and tell them MUCH PROPS.

* The horns were carved from some 24mm EVA DOWELS.
You can skip to 7:53 in the video to see how they are made.

* The raised black trim is made from some 6mm EVA DOWELS.
