

PLAGUE MASK

From my imagination
By Thomas Hanna

I made this template for making my own design of a Plague doctor mask by modifying the Psycho Mask from Borderlands 3. Please feel free to make any modifications you would like.

- Cut out all the pieces of the template and trace them onto the material of your choice (I used 10 mm, 6 mm and 1 mm EVA foam)
- Most of the parts contain registrations marks, which look like little U's on the edges. These marks are to help you keep the shape aligned and force the foam into a curve. You trace these onto the foam, you do not cut them.
- There are blue highlighted edges on a lot of the pieces, this blue means that the edge it is on needs a 45-degree angled cut inward. Yellow means a 45 degree outward cut. Green is to help you align the vent bevel with the vent base and the pink lines were for the psycho mask so disregard them.
- You could certainly try and make it out of other thicknesses of EVA, I chose 6 mm because I needed the parts to be sturdy but still have enough flexibility for me to curve into shape.
- Some parts have an * followed by a L. This means that there should be a right and a left. The L stands for left obviously. To get the right side, simply put the pattern written side down to get the mirror image of that part.
- If a part has a X followed by a number, that simply means that there should be multiple copies of that part.
- I also cut some thin strips of 1 mm EVA to add as decorative touches that covered up my seam lines. Those are not templated on the following pages.
- Along with the EVA/craft foam you will need: aquatic vinyl tubing, black transparent material for the lenses, 1 inch elastic banding for straps, LED lights with a battery pack, contact cement, super glue, hot glue, heat gun, a rotary tool , rotary sanding bits, wood burner, scissors, xacto or box cutter, Plasti dip or something to seal it with, spray paint, and acrylic paints.

Hopefully this is helpful and keep in mind it is a free template (so please don't be judgmental). Share this with everyone you know. I spend a lot of extra time making these templates and would love to be tagged in photos of your end results on social media. And inevitably someone is going to ask you, HOW did you make that? Give them one of these  and tell them MUCH PROPS.
