

User Guide for Sanitation Station

Shoes

- Designate this location for only shoes that you wear out.
- As long as these are kept separate, they do not need to be cleaned after each use.

Packages

- Isolate packages for at least 24 hours before opening.
- If they need to be opened before then, disinfect first.

Small Items

- When entering, place items that you carry in their designated location, such as a bowl or hook.
- Do not put these down in other parts of the house without disinfecting first.

Cleaning Supplies

- Keeping cleaning supplies near prevents you from traveling to other parts of your home to get them.
- Keep track of how much you have to prevent running out.

Mask/Gloves

- Keeping these near reminds you to wear them
- When you get home, take these off immediately

***Trash Bin**

- Nearby to prevent going elsewhere with contaminated items.

***Hamper**

- Put your heavily exposed clothes and/or reusable mask in here before going elsewhere

***Boundary Line**

- Use commonly found items like tape to mark this
- Do not let contaminated items, including yourself, cross this line without taking the proper steps

**These areas are optional and can be accomplished with careful handling to prevent contamination of other areas of your home.*
