

INSTRUCTABLE

LIGHT UP GALAXY TANK TOP

a tank top that can easily convert to a crop top with led lights. perfect for a day to night look. made with conductive materials that when the zipper zip up, the lights will light up.

MATERIAL

- 1 metal zipper
- 2 sewable battery holders
- 7 sewable LEDES
- 1 role of conductive threads
- 1 yard of raw silk and neon print

STEPS

1. Gather the materials
2. Design the circuit of the design you want to have on the garment. For me I designed the circuit based on the BIG DIPPER.
3. Construct the base of the garment, I used 2 layers of fabric so the leds will not be too noticeable on the surface. Leave the side seam open.
4. Sew the conductive thread along the metal zipper. Only next to the part that you place your battery holder or where you connect the leds.
5. Sew the circuit onto the garment.
6. Close the seam. Test it.
7. If it works, use clear nail polish to touch up on the ties of the conductive thread to make it stable.

MY CIRCUIT PATTERN
